Spectrometer

Li Bin

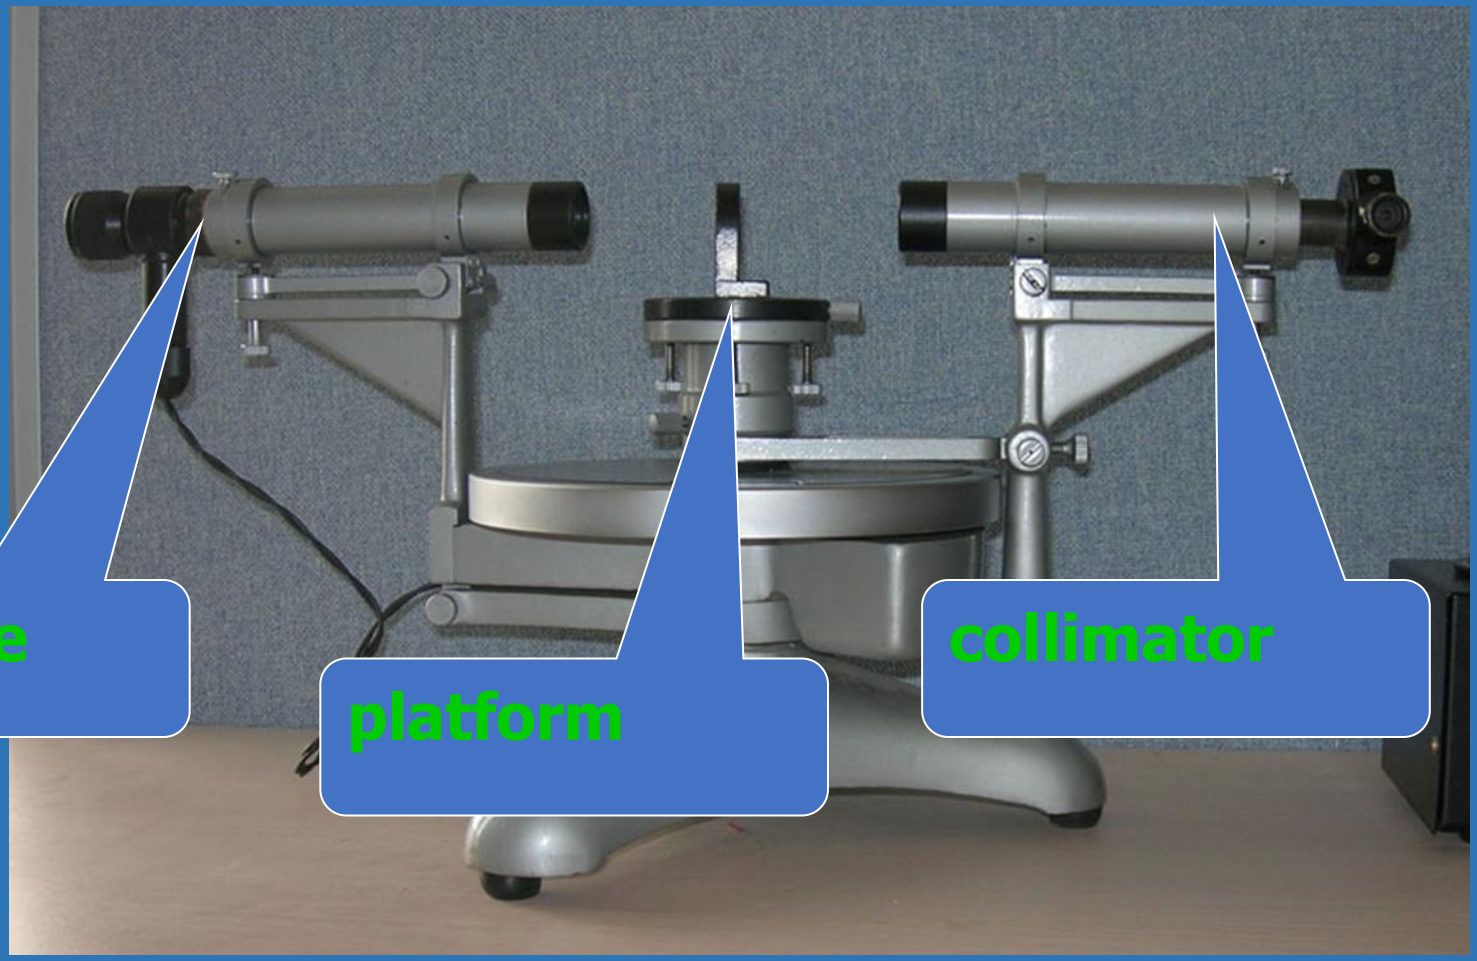
NJUPT

Experimental purposes

1、The structure and adjustment of spectrometer.

2、The measurement of the vertex angle of prism.

Instruments



Adjustments of spectrometer

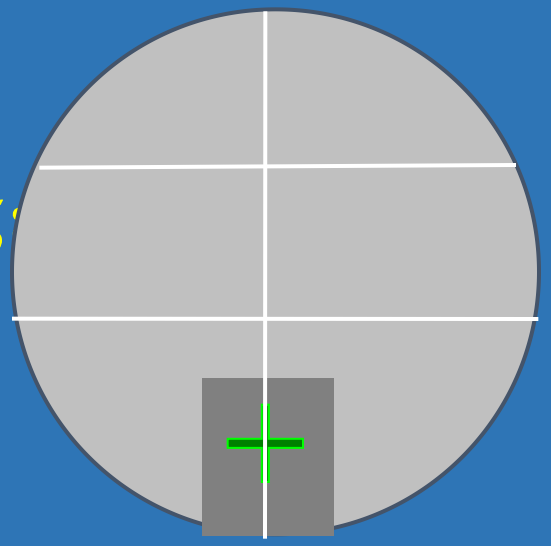
Make the telescope focused at infinity

Make the axis of telescope & platform are perpendicular to the center axis

Make the axis of collimator are perpendicular to the center axis

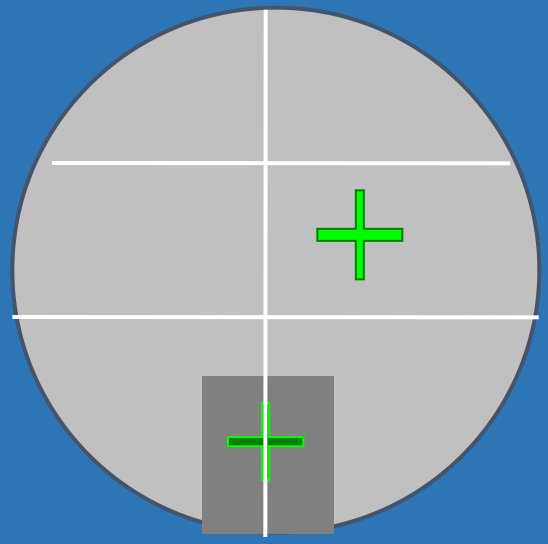
Telescope

❖**Eyepiece (eye lens) focusing:**



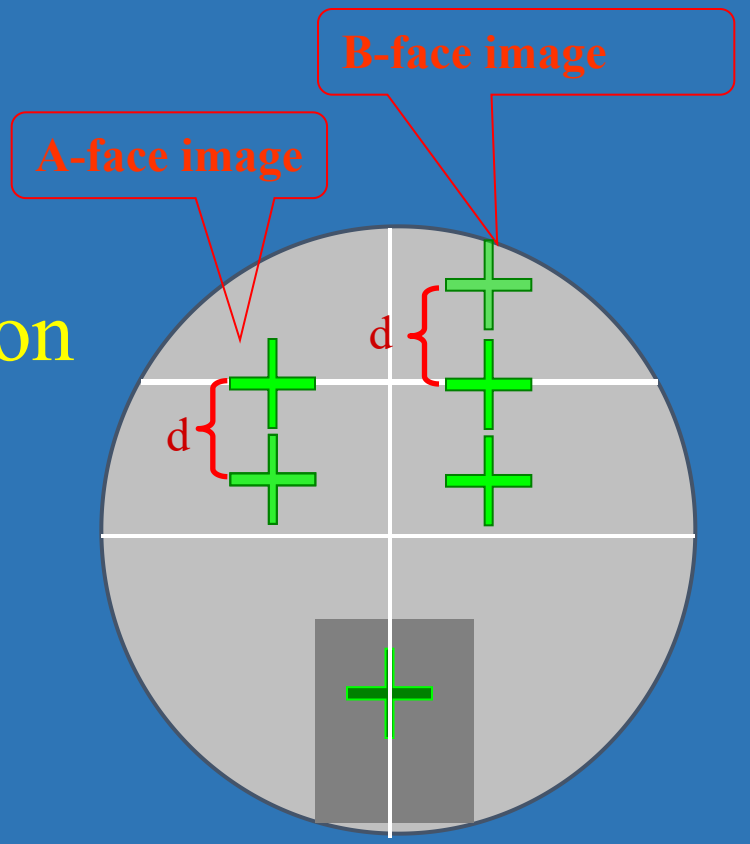
❖**Objective lens focusing:**

Make the double-faced mirror attached to the objective lens, move the eyepiece sleeve, then tighten the locking screw.

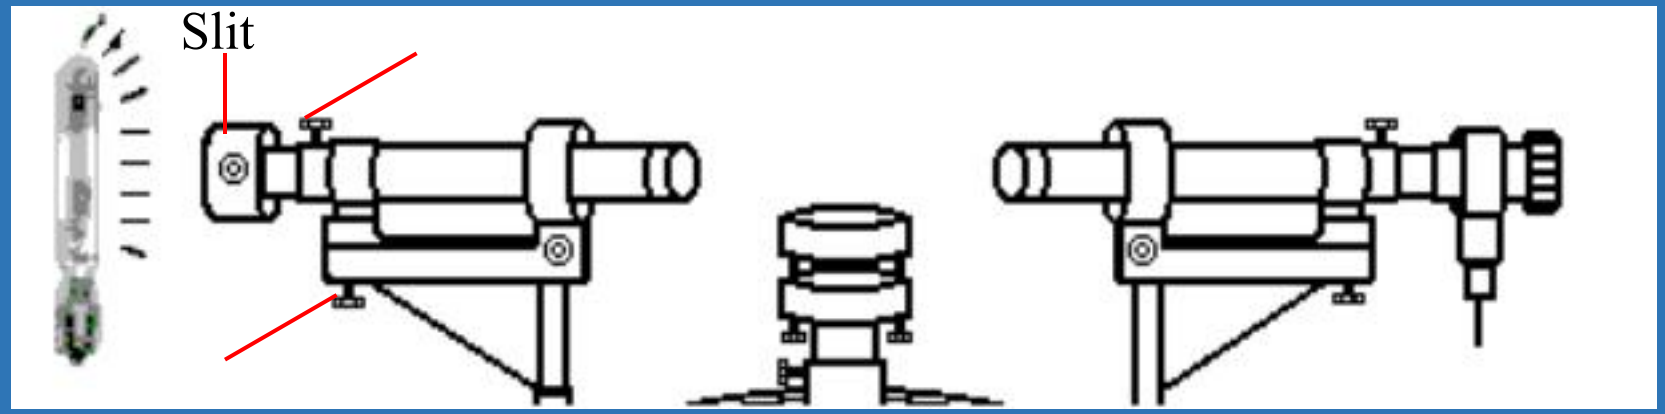


Vertical adjustment

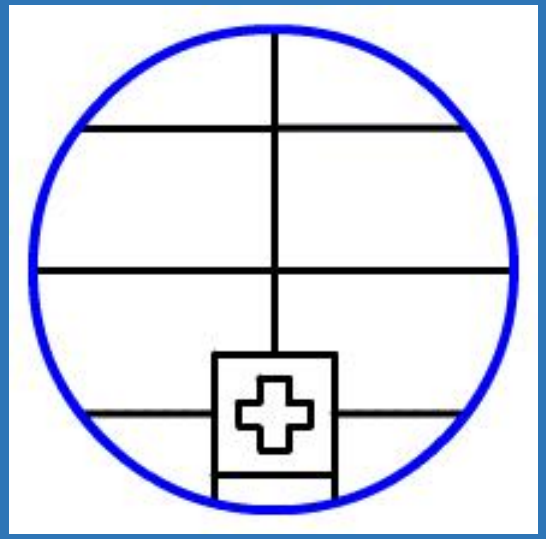
- Final vision: see right
- Method:
  - Three adjusting screw button under the loading platform
  - The telescope elevation adjusting screw
- Steps:
  - Coarse adjustment
  - Fine adjustment



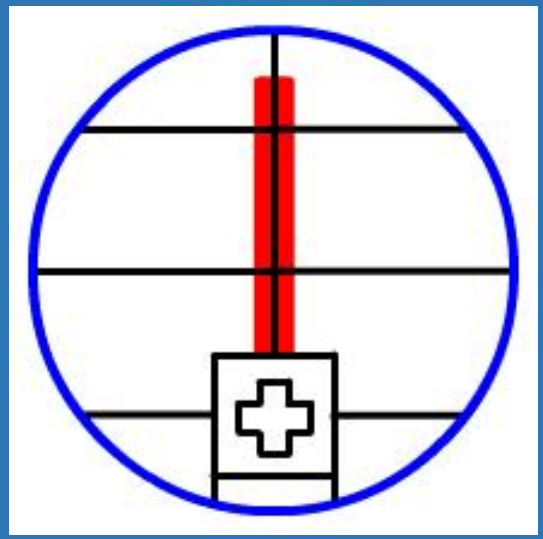
collimator



①

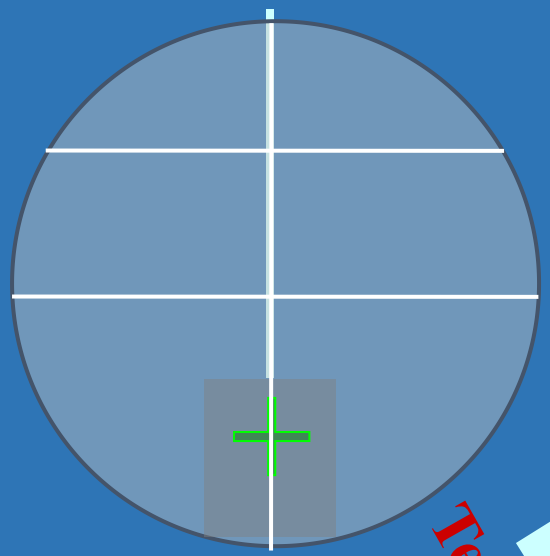


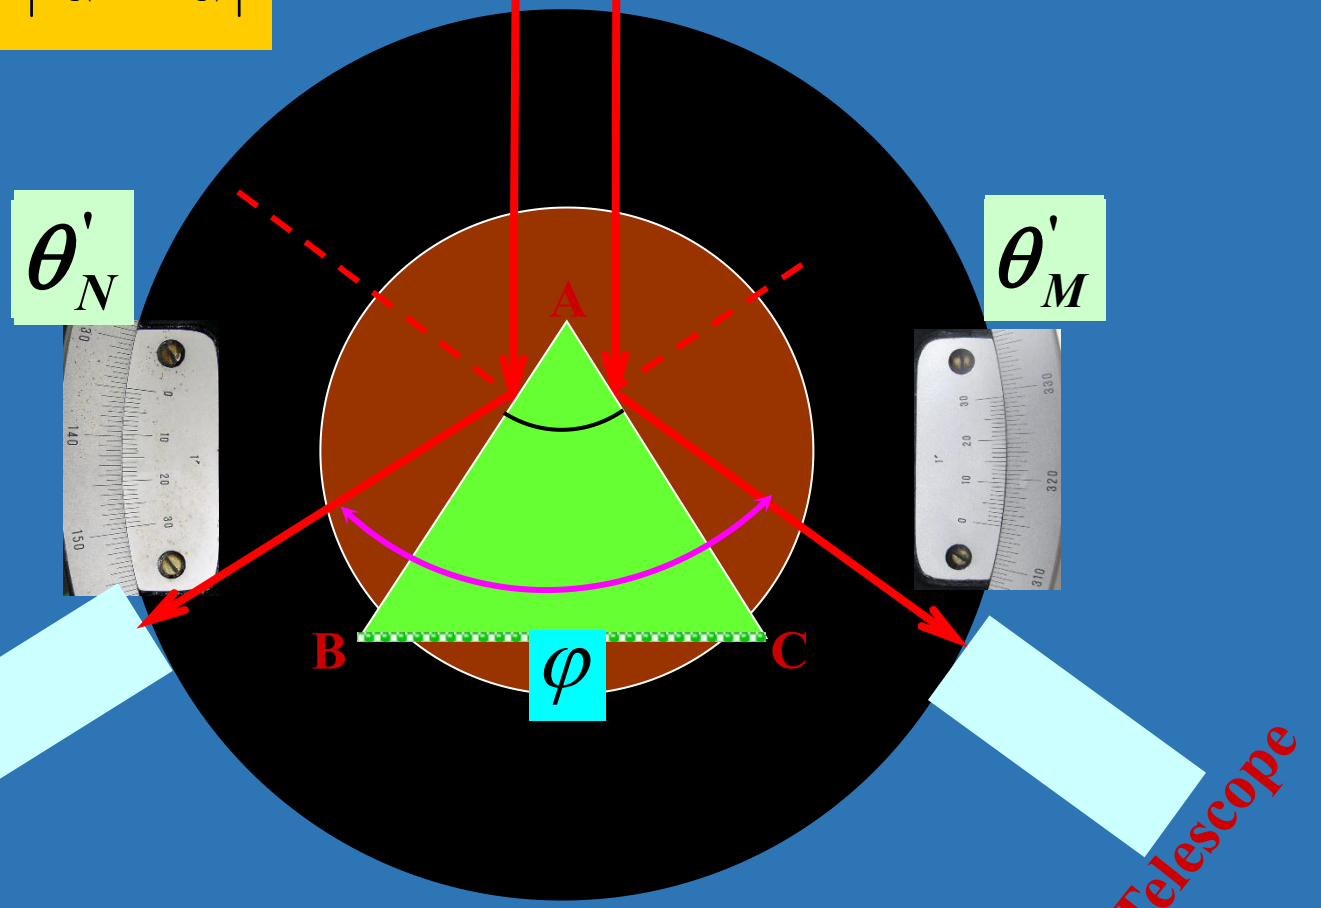
②



Measure the vertex angle

$$A = \frac{\varphi}{2} = \frac{1}{4}[\left|\theta'_M - \theta_M\right| + \left|\theta'_N - \theta_N\right|]$$





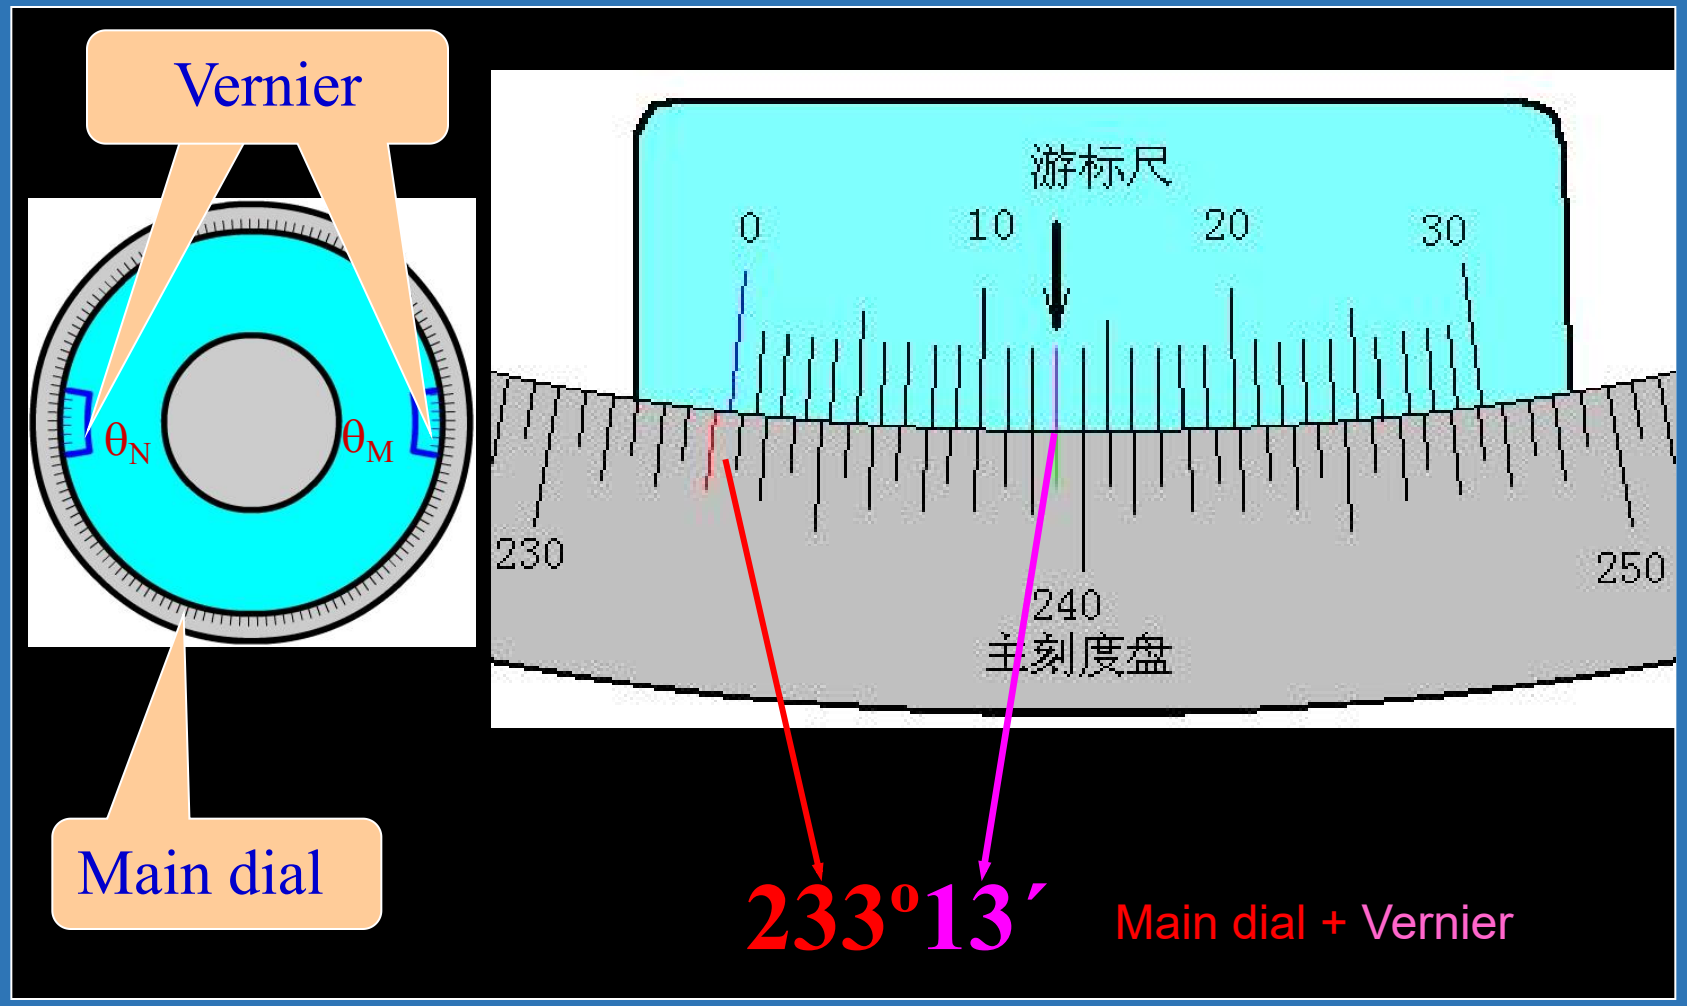
Calculate the vertex angle :

$$A = \frac{1}{4}(|\theta'_M - \theta_M| + |\theta'_N - \theta_N|)$$

We need to measure four angles:

θ_M θ_M' θ_N θ_N'

Reading system



Data

➢Table

NO. \ Angle	θ_M	θ_N	θ_M'	θ_N'	$\lvert\theta_M - \theta_M'\rvert$	$\lvert\theta_N - \theta_N'\rvert$	$A=[\lvert\theta_M - \theta_M'\rvert+\lvert\theta_N - \theta_N'\rvert]/4$	Average value $\overline{A}$
1	319°11’	139°8’	199°4’	19°4’				
2								
3								

1° = 60’

1. Please finish the table I.
2. Write a 200-word essay in the report to describe this experiment.

The DEADLINE is April 10, 2025.
The monitor collects and submits all homework next class.

END
